
ionic mineral drops

Supports Cell Energy, and Heart, Kidney and Nerve Health

ionic mineral drops is a charged mineral complex of 77 electrolyte minerals, especially magnesium and chloride. Chloride is the second most abundant ion in the body.

The minerals in ionic mineral drops support normal, healthy heart, nerve, kidney and adrenal function, and also support the entire body, including ensuring for strong bones, healthy immune function and optimal energy levels. This natural complex of charged electrolytic minerals includes calcium, potassium, sodium, zinc, iodide, selenium, boron, iron and manganese.

ionic mineral drops is an ideal daily replenishment of magnesium, which helps to support the conversion of nutrients into energy for the whole body, including the brain and muscles. Electrolytes conduct electrical charges for normal muscle and nerve function. Electrolytic minerals either have a positive or negative electrical charge when dissolved in water. The fluids and cells of the body contain electrolytes that help regulate chemical and enzyme reactions, and they also maintain the balance between the fluids inside and outside of cells. Electrolytes are derived from the foods and liquids we consume. Excess electrolytes are filtered by the kidneys and excreted through the urine or via sweating.

The natural balance of potassium, sodium, calcium and magnesium found in the ionic mineral drops support normal, healthy heart rhythm, reflexes, breathing and muscle function. Healthy adrenal glands (also known as "the stress glands") perform a variety of functions, including fluid and hormone balance, immune response, collagen production, kidney filtration, sugar metabolism and stress management. Key nutrients that support normal, healthy adrenal glands include magnesium, potassium, sodium, vitamin C and the vitamin B complex.

ionic mineral drops is naturally concentrated with chloride anions, which help maintain intracellular fluids and the body's natural pH balance.

ionic mineral drops helps support and maintain a healthy immune system by providing zinc, copper, selenium, silver, gold, manganese and molybdenum.
