

Camu Camu

Vitamin C Fruit Powder

Supports Normal, Healthy
Cardiovascular and Immune Function

Camu Camu Vitamin C Fruit Powder contains 100% pure, organic, air-dried camu camu berry powder from the Amazon region of South America. The camu camu berry provides vitamin C in the botanical enzyme form, with its naturally occurring metabolites, such as quercetin, rutin and the phenolic compound called ellagic acid. Camu camu contains a higher concentration of vitamin C than most other botanical sources.

Vitamin C is the most abundant nutrient in camu camu fruit, however, it also contains minerals, B vitamins, amino acids, antioxidants and polyphenols.

Vitamin C is a key nutrient, as it supports normal, whole-body health, including supporting the adrenal glands, kidneys, heart, blood vessels, skin, gums, brain, nerves, eyes and immune function. Vitamin C is also necessary for the body's collagen production, which supports healthy bones, cartilage and tendons. Vitamin C is a water-soluble antioxidant required for our cells to burn fat for energy, uptake iron, and for normal, healthy sugar metabolism.

Camu camu contains more than 100mg of vitamin C per 1.35g, which is approximately 30 times more than oranges. It has a tart, citrus flavor, ideal for children, adults, athletes and seniors. Stir into a glass of water or blend in a smoothie.

Immunologic's Camu Camu Vitamin C Fruit Powder is 100% pure camu camu fruit powder without fillers or synthetic ascorbic acid. And it is packed in Miron Violet Glass for maximum potency and freshness.
